Introduction and Framework

Executive Summary

Organization: IBD Non-Profit Organization

Problem: Patients are being redirected to external websites for recipe guidance, resulting in fragmented user experience and limited engagement.

Objective: Create a recipe management platform allowing patients, caregivers, and contributors to discover, submit, review, and share recipes tailored to dietary requirements.

Business Value:

Increased user engagement

Improved patient experience

Reduced dependency on external resources

Increased community-generated content

Problem Statement: The members of the non-profit organization want to introduce a section called recipe to their website which can help the IBD (Inflammatory bowel disease) community to cook their own recipes based on their preferences and others to contribute pertaining to the context.

Product Name and Primary Goal

Name of the Product: Recipe

Primary Goals

- 1) Utilizing the platform to increase the awareness of the best available recipes for the IBD patients and personas related to them.
- 2) Make the platform more content driven by engaging the community of IBD globally.

Target Group

- 1) Patients: Patients looking out for recipes to cook to keep the symptoms in control
- 2) Care Givers: Looking for recipes on behalf of patients
- 3) Contributors: People who want to add recipes for the patients/caregivers

- 4) Admin: Filter recipes submitted by the contributors for patients/caregivers

Big Picture

- 1) Unique Value Proposition: Providing customized ingredients and diet-based recipe suggestions to the patients and providing nutritional calculation of the amount of calorie intake per serving.
- 2) Channels: Using the below mediums and ways to promote the new feature.
Online Channels/ Pop Up Notifications/ Promotion Mails/ Release Notes
- 3) Resources: Utilizing existing internal resources, patents, copyright etc.

Product Details

Recipe section in addition to the website to get it redirected to recipes

On the Recipe Page:

- 1) Checklist to select the ingredients: (type of vegetables, flour, beverages, pulses, oil)
- 2) Checklist on allergies: Filter tabs to select the kind of diet we want (low-salt, low-fiber, low-fat, lactose-free, high-calories etc)
- 3) Display the full recipe
- 4) Nutritional Calculator

Healthcare Recipe Management Platform: End-to-End Business Analysis Case Study Framework

 - Homepage
 - Recipe Listing Page
 - Recipe Details Page
 - Recipe Submission Page
 - Admin Dashboard
 - User Profile Page
27. Risks, Assumptions & Dependencies (RAID)
28. Lessons Learned

Business Objectives

- 1. Increase recipe engagement by 40% within 6 months.
- 2. Reduce external recipe referrals by 60%.
- 3. Increase community-generated content by 50%.
- 4. Improve patient satisfaction scores.
- 5. Create a scalable recipe approval process.

Stakeholder Analysis

Stakeholder	Interest	Influence	Needs
Patients	High	Medium	Easy access to recipes
Caregivers	High	Medium	Reliable meal recommendations
Contributors	Medium	Low	Easy recipe submission
Admin	High	High	Content moderation
Doctors/Nutritionists	High	High	Safe dietary recommendations

Success Metrics / KPIs

KPI	Current	Target
Recipe Views	0	5,000/month
Recipe Submissions	0	100/month
User Engagement Rate	0%	40%
Average Recipe Rating	N/A	4+ stars
Approval Turnaround Time	N/A	<48 hours

Stakeholder Interview Findings

Discovery Phase Findings

Interview 1 - Patient

Pain Points:

- Difficult to find trusted recipes
- Too many external websites
- No dietary filtering

Interview 2 - Caregiver

Pain Points:

- Time consuming to search recipes
- Difficult to verify nutritional suitability

Interview 3 - Admin

Pain Points:

- No standard approval process
- Recipe submissions arrive through multiple channels

Assumptions / Identify Scope

Current state:

- Providers/caregivers are sending patients to other resources (external websites, blogs, FB Groups and etc) for recipes
- Printed materials for patients are available in the office, but they can't distribute via email or send them to internal sites

In Scope:

- List of instructions to create a meal + video

Out-of-Scope:

- Patients using the website are already registered users

Business Requirements

BR-01: Platform must allow users to search recipes.

BR-02: Platform must allow users to filter recipes.

BR-03: Platform must allow contributors to submit recipes.

BR-04: Platform must allow admins to approve/reject recipes.

BR-05: Platform must provide nutritional information.

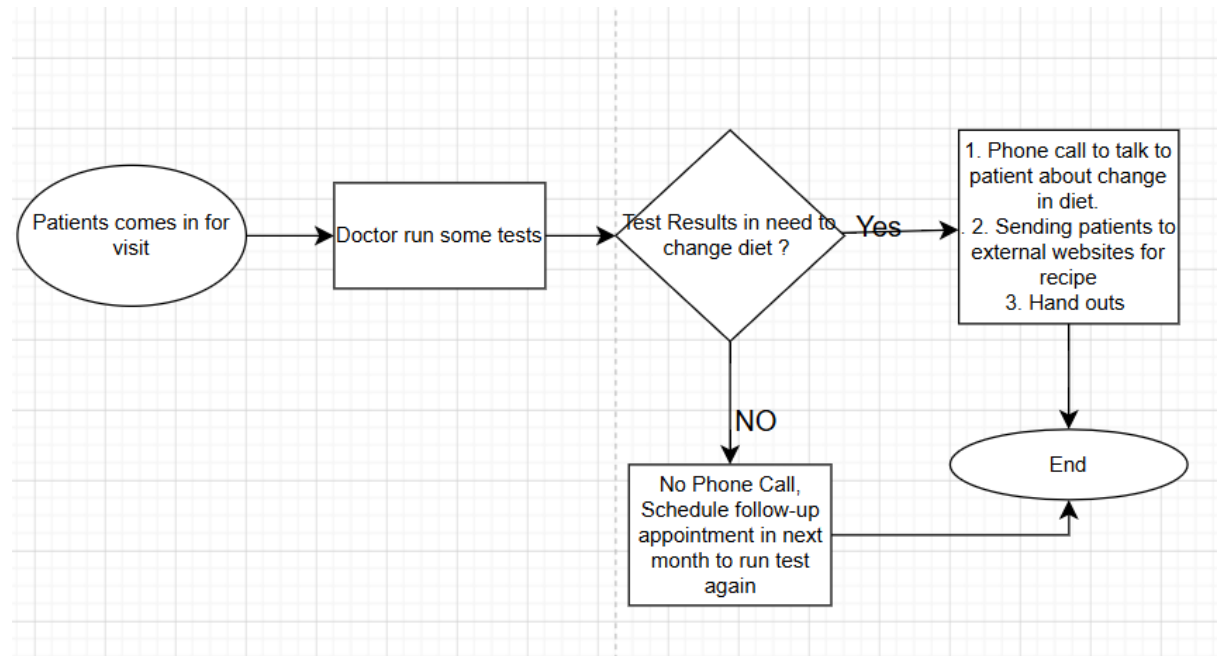

Non-Functional Requirements

- Security: Only admins can approve recipes.
- Performance: Search results displayed within 2 seconds.
- Availability: Platform available 99.5% of the time.
- Accessibility: WCAG compliant.
- Scalability: Support 10,000+ recipes.

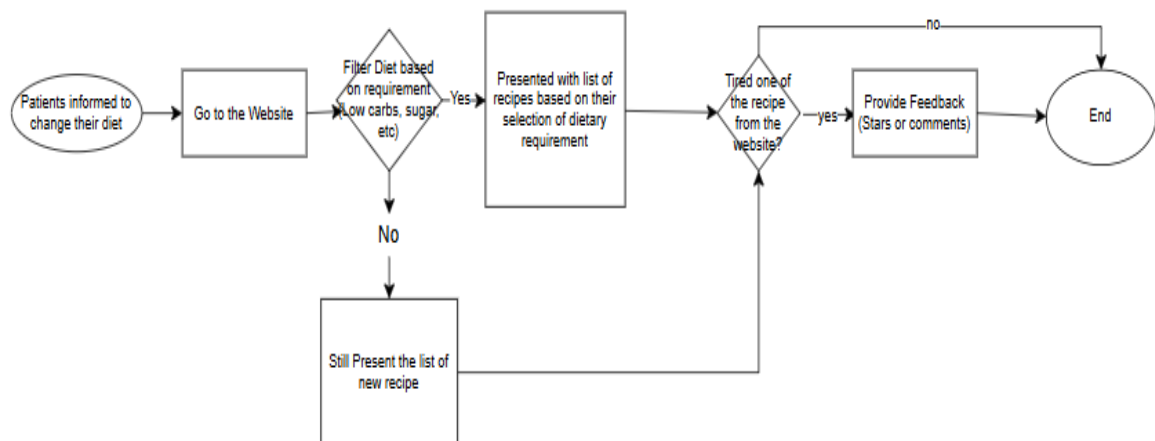

MoSCoW Prioritisation

Requirement	Priority
Search Recipes	Must Have
Submit Recipe	Must Have
Admin Approval	Must Have
Ratings	Should Have
Email Sharing	Could Have
Social Media Sharing	Could Have

Creating a Product Backlog

Organization of Requirements (Agile)

1. Features:

- Recipes section on website

2. Epics:

- 1) Admin Panel to approve recipes
- 2) Submit new recipes

3. User Stories

- 1) Form to submit new recipes

4. Tasks

Product Backlogs:

1. Submit new recipes
 - a. Button website to “Submit New Recipes”
 - b. Create a Form for people to submit new recipes – New/Registered (Doctor, Patient, Other) User
 - c. Create a Form for people to submit new recipes – Required fields.
 - d. Create a Form for people to submit new recipes – Optional fields.
 - e. Create a Form for people to submit new recipes – Filter (Diet Based)
2. Review/Use recipes based on diet needs
 - a. Create search bar to search recipes by ingredient or recipe name.
 - b. Display recipes based on selected diet preference.
 - c. Display nutritional information for each recipe.
 - d. Allow users to view recipe preparation time.
 - e. Allow users to view cooking instructions step-by-step.
 - f. Allow users to watch recipe video tutorials.
3. Feedback on recipe
 - a. Create a area for people to provide feedback like comment (text up to 200 characters)
 - b. Allow people to add star ratings (1 to 5 stars)
 - c. Display average ratings for recipes
4. Filter on type recipe
 - a. Selection of type (vegetarian, non-vegetarian, vegan, keto, lactose free) to display all recipes that apply on screen.
 - b. Selection of sub-type (low carbs, high/low fiber, high/low protein)
 - c. Allow users to save type of recipe filter.
 - d. Allow users to apply multiple filters at the same time.
5. Approved recipe submitted
 - a. Admin to review submitted recipes.
 - b. Admin to approve or reject recipes.
 - c. Admin to add comments while rejecting recipes.
 - d. Approved recipes to be published on website automatically.
6. Email to patients and send recipes.

7. Email to friend

- a. Allow users to share recipe through email.
- b. Allow users to enter multiple email addresses.
- c. Generate recipe link in email automatically.

8. Share on social media.

- a. Allow users to share recipes on Facebook.
- b. Allow users to share recipes on Instagram.
- c. Allow users to copy recipe link.

9. Dashboard Usage

- a. Display total number of recipes viewed.
- b. Display most popular recipes.
- c. Display number of recipes submitted by contributors.
- d. Display user engagement and feedback analytics.

10. Admin Approval Process – Approval

- a. Create admin login access.
- b. Display pending recipes in admin dashboard.
- c. Allow admin to approve recipes in one click.
- d. Store approved recipes in database.

11. Admin Approval Process – Notification Messages

- a. Send notification to contributor after recipe approval.
- b. Send notification to contributor after recipe rejection.
- c. Display success message after recipe submission.
- d. Display error message for incomplete form submission.

12. User Profile Management

- a. Allow users to save favorite recipes.
- b. Allow users to view previously viewed recipes.
- c. Allow users to manage dietary preferences in profile settings.

13. Security and Validation

- a. Validate mandatory fields in recipe submission form.
- b. Restrict inappropriate content submission.
- c. Secure admin access with login authentication.

User Stories

1. Submit new recipes

1.1 Button website to “Submit New Recipes”

1.1.1 *As a patient, I want to click on a button “**Submit New Recipes**”, so that I can submit new recipes for review and usage.*

Given, the patient is a registered user and logged in on “Recipes Page”

When, the patient clicks on “Submit New Recipe” button

Then, have the ability to see the “New Recipe Form”

1.1.2 *As a doctor/caretaker, I want to click on a button “**Submit New Recipes**”, so that I can submit new recipes for review and usage.*

Given, the doctor/caretaker is a registered user and logged in on “Recipes Page”

When, the doctor/caretaker clicks on “Submit New Recipe” button

Then, have the ability to see the “New Recipe Form”

1.1.3 *As an Admin, I want to click on a button “**Submit New Recipes**”, so that I can submit new recipes for review and usage.*

- a. Front end developers create button: Submit New recipe button (where on the pages this needs to go)
- b. Click on submit new recipe button – what’s the outcome? New page be populated
- c. Creating the form

Given, I logged in into the admin panel

When, the patient clicks on “Submit New Recipe” button

Then, have the ability to access the “New Recipe Form” submitted by user

Then, the new recipes submitted displayed on the public site without needing approval.

1.2 Create a Form for people to submit new recipes – new/registered (Doctors, Patient, Other) Users

- a. Create input fields for recipe details
- b. Allow users to upload recipe images/videos
- c. Store submitted recipes in database

1.2.1 As a Patient, I want to fill out the “New Recipe Form”, so that I can submit my recipe for approval

Given, the patient is logged into the website

When, the patient enters recipe details in the form

Then, the patient should be able to submit the recipe successfully

1.2.2 As a doctor/caretaker, I want to fill out the “New Recipe Form”, so that I can submit my recipe for approval

Given, the doctor/caretaker is logged into the website

When, the doctor/caretaker enters recipe details in the form

Then, doctor/caretaker should be able to submit the recipe successfully

1.2.3 As an other user, I want to access the “New Recipe Form”, so that I can contribute recipes to the IBD community.

Given, the user is registered or request for registration and logged in

When, the user fills the recipe submission form

Then, the recipe should be stored in the system for approval.

1.3 Create a form for people to submit new recipes - required fields

a. Mandatory fields: Recipe Name

b. Mandatory fields: Ingredients

c. Mandatory fields: Cooking Instructions

d. Mandatory fields: Diet Type

e. Mandatory fields: Preparation Time

f. Display validation messages for empty fields

1.3.1 As a patient, I want mandatory fields in the recipe form, so that complete recipe information can be submitted.

Given, the patient is on the recipe form page

When, the patient leaves mandatory fields empty

Then, an error message should be displayed

1.3.2 As an admin, I want all required recipe information submitted, so that incomplete recipes are not approved.

Given, the user submits recipe form

When, mandatory fields are completed

Then, the form should be submitted successfully

1.4 Create a Form for people to submit new recipes – optional fields

As a contributor, I want optional fields in the recipe form, so that I can provide additional recipe information.

- a. Optional field: Recipe Video Link
- b. Optional field: Nutritional Information
- c. Optional field: Cooking Tips
- d. Optional field: Allergy Notes
- e. Optional field: Recipe Image Upload

Given, the contributor is filling out the form

When, optional details are added

Then, the information should be saved successfully.

Then, even if the fields are blank, still the user able to submit the form successfully

1.5 Create a from for people to submit new recipes – Filter (Diet Based)

- a. Create filter options for diet types
- b. Add filter for vegetarian recipes
- c. Add filter for vegan recipes
- d. Add filter for lactose-free recipes
- e. Add filter for low-fiber recipes
- f. Add filter for low-fat recipes
- g. Allow multiple diet selections

1.5.1 As a patient, I want to select diet categories while submitting recipes, so that recipes can be filtered correctly for users

Given, the patient is filling the recipe details in the form

When, the patient selects diet type

Then, the recipe details should appear under selected diet category.

1.5.2 As a admin, I want recipes categories by diet type, so that users can easily search suitable recipes

Given, the recipe is submitted successfully

When, diet filter is selected

Then, the recipe should display under corresponding filter category.

2. Review/Use recipes based on diet needs

2.1 Create search bar to search recipes by ingredient or recipe name.

2.1.1 *As a patient, I want to search for a recipe by ingredient or some name, so that I can save that to my personal dashboard on the website or look into the recipe in easier and fastest way*

Given, the patient is logged in to website

When, the search bar is selected and entered the name or ingredient of recipe

Then, the list of recipes should be populated with similar ingredients or names as mentioned by users.

2.1.2 *As a doctor/caretaker, I want to search for a recipe by ingredient or some name, so that I can save that to my personal dashboard on the website or investigate the recipe in easier and fastest way*

Given, the doctor/ caretaker is logged in to website

When, the search bar is selected and entered the name or ingredient of recipe

Then, the list of recipes should be populated with similar ingredients or names as mentioned by users.

2.2 Display recipes based on selected diet preference.

As a user, I want to see only a filter option to select the diet preference, so that I can check only relevant diet recipes of my choice as per my selected diet preference.

Given, the user is on the Recipes Page

When, the user selects a diet preference filter

Then, the system should display only the recipes matching the selected diet preference.

2.3 Display nutritional information for each recipe.

As a user, I want to view nutritional information for each recipe, so that I can understand the calorie and nutrition intake before preparing the meal.

Given, the user is viewing a recipe

When, the user opens the recipe details page

Then, the system should display nutritional information for the selected recipe.

2.4 Allow users to view recipe preparation time.

As a user, I want to view recipe preparation time, so that I can choose recipes based on the time available for cooking.

Given, the user is viewing a recipe

When, the recipe details page is displayed

Then, the preparation and cooking time should be visible to the user.

2.5 Allow users to view cooking instructions step-by-step.

As a user, I want to view cooking instructions step-by-step, so that I can easily follow the recipe preparation process.

Given, the user selects a recipe

When, the recipe page opens

Then, the cooking instructions should be displayed in step-by-step format.

2.6 Allow users to watch recipe video tutorials.

As a user, I want to watch recipe video tutorials, so that I can better understand the cooking process visually.

Given, the user is viewing a recipe page

When, the recipe contains a video tutorial

Then, the user should be able to play and watch the recipe video successfully.

3. Feedback on recipe

3.1 Create an area for people to provide feedback like comment (text up to 200 characters)

- a. Front-end developers create a feedback/comment box on the recipe details page.
- b. Add character limit validation for maximum 200 characters.
- c. Add “Submit Feedback” button below the comment box.
- d. Display error message if the comment is more than 200 characters.
- e. Back-end developers store the feedback comment in the database.
- f. Link each feedback comment to the correct recipe ID and user ID.
- g. Display submitted feedback under the correct recipe.
- h. Allow only logged-in users to submit feedback.
- i. Add basic content validation to block inappropriate words/spam.
- j. Show success message after feedback is submitted.
- k. Make feedback section completely optional

As a user, I want to provide feedback and comments on recipes, so that I can share my experience and help improve recipe quality for the IBD community.

Given, the user is viewing a recipe page

When, the user enters feedback within 200 characters and clicks submit

Then, the feedback comment should be displayed successfully under the recipe.

3.2 Allow people to add star ratings (1 to 5 stars)

- a. Front-end developers create star rating option (1 to 5 stars) on recipe page.
- b. Allow only logged-in users to submit ratings.
- c. Back-end developers store recipe ratings in database.
- d. Link rating with correct recipe and user ID.
- e. Display success message after rating submission.

As a user, I want to provide star ratings for recipes, so that I can share my experience and help other users identify useful recipes.

Given, the user is viewing a recipe page

When, the user selects a rating between 1 to 5 stars and clicks submit

Then, the selected rating should be saved and displayed successfully for the recipe.

3.2 Display average ratings for recipes

- a. Calculate average ratings based on user submissions.
- b. Display average star ratings on recipe listing page.
- c. Update ratings automatically when new ratings are submitted.
- d. Display total number of ratings received per recipe.

As a user, I want to view average ratings for recipes, so that I can identify highly rated recipes easily.

Given, the user is viewing recipes on the platform

When, ratings are submitted by multiple users

Then, the system should display the average rating for each recipe.

4. Filter on type recipe

4.1 Selection of type (vegetarian, non-vegetarian, vegan, keto, lactose free) to display all recipes that apply on screen

- a. Front-end developers create recipe type filter options on Recipes Page.
- b. Allow users to select one or multiple recipe type filters.
- c. Back-end developers fetch recipes based on selected filters.
- d. Display filtered recipes dynamically on screen.

As a user, I want to filter recipes based on recipe type(main criteria), so that I can view recipes suitable for my dietary preference.

Given, the user is on the Recipes Page

When, the user selects a recipe type filter

Then, the system should display only recipes matching the selected filter.

4.2 Selection of sub-type (low carbs, high/low fiber, high/low protein)

- a. Create sub-type filter options for nutrition categories.
- b. Allow users to apply multiple sub-type filters simultaneously.
- c. Store filter selections temporarily during user session.
- d. Display filtered recipe results automatically.

As a user, I want to filter recipes based on nutritional sub-types of recipe filter type on Main criteria, so that I can select recipes according to my health and dietary needs.

Given, the user is viewing recipe filters

When, the user selects a nutritional sub-type filter

Then, the system should display recipes matching the selected nutritional criteria.

4.3 Allow users to save type of recipe filter

- a. Create “Save Preferences” button on filter section.
- b. Store saved filter preferences in user profile database.
- c. Automatically apply saved filters when user revisits Recipes Page.
- d. Allow users to edit or remove saved filter preferences.

As a user, I want to save my preferred recipe filters, so that I do not need to select the same filters repeatedly.

Given, the user selects preferred recipe filters

When, the user clicks on “Save Preferences”

Then, the selected filters should be saved successfully in the user profile.

5. Approved recipe submitted

5.1

As an admin, I want to review submitted recipes, so that only appropriate and accurate recipes are available for the IBD community.

Given, the admin is logged into the admin panel

When, the admin opens the submitted recipes section

Then, all pending recipes should be displayed for review.

5.2

As an admin, I want to approve or reject submitted recipes, so that only verified recipes are published on the website.

Given, the admin is reviewing a submitted recipe
When, the admin clicks approve or reject
Then, the recipe status should be updated successfully.

5.3

As an admin, I want to add comments while rejecting recipes, so that contributors understand the reason for rejection.

Given, the admin rejects a recipe
When, the admin enters rejection comments
Then, the rejection reason should be saved and shared with contributor.

5.4

As a user, I want approved recipes to be published automatically, so that I can access newly approved recipes without delay.

Given, the admin approves the recipe
When, the recipe status changes to approved
Then, the recipe should automatically appear on the public Recipes Page.

6. Email to patients and send recipes

6.1

As a patient, I want to receive recipe recommendations through email, so that I can easily access suitable recipes based on my dietary needs.

Given, the patient is subscribed to recipe emails
When, new recipes are approved or recommended
Then, recipe details should be sent to the patient through email.

6.2

As a doctor/caretaker, I want to send or recommend recipe emails to patients, so that I can support them with suitable meal options.

Given, the doctor/caretaker is logged into the platform
When, the doctor/caretaker selects a recipe and chooses to send it to a patient
Then, the selected recipe should be emailed to the patient successfully.

6.3

As an admin, I want approved recipes to be sent to subscribed patients, so that users can be informed about newly available recipes.

Given, the admin has approved a new recipe

When, the recipe is published on the website

Then, subscribed patients should receive an email notification with the recipe link

6.4

As a doctor/caretaker, I want to recommend recipes to patients based on their health results and dietary needs, so that patients can receive suitable recipe suggestions through email.

Given, the doctor/caretaker is logged into the platform and has reviewed the patient's health results or dietary requirements

When, the doctor/caretaker selects suitable recipes and sends them to the patient

Then, the patient should receive an email with recommended recipes based on their health results and dietary needs.

7. Email to friend

7.1 Allow users to share recipe through email

As a user, I want to share recipes with my friends through email, so that I can recommend useful recipes to others.

Given, the user is viewing a recipe page

When, the user selects "Share through Email" option

Then, the recipe should be shared successfully through email.

- a. Create "Share through Email" button on recipe page.
- b. Generate recipe details automatically in email body.
- c. Allow only logged-in users to share recipes through email.
- d. Display success message after email is sent.

7.2 Allow users to enter multiple email addresses

As a user, I want to enter multiple email addresses, so that I can share recipes with multiple people at the same time.

Given, the user selects email sharing option

When, the user enters multiple email addresses

Then, the recipe email should be sent to all entered recipients successfully.

7.3 Generate recipe link in email automatically

As a user, I want the recipe link to be automatically added in the email, so that recipients can directly access the recipe page.

Given, the user shares a recipe through email

When, the email is generated

Then, the recipe link should be included automatically in the email body.

- a. Generate recipe URL automatically during email creation.
 - b. Include recipe title and link in email body.
 - c. Redirect recipients to recipe details page through shared link.
8. Share on social media

8.1 Allow users to share recipes on Facebook

As a user, I want to share recipes on Facebook, so that I can recommend recipes to my social network.

Given, the user is viewing a recipe page

When, the user clicks on Facebook share option

Then, the recipe link should be shared successfully on Facebook.

- a. Create Facebook share button on recipe page.
- b. Generate recipe link automatically for sharing.
- c. Redirect users to Facebook sharing page.

8.2 Allow users to share recipes on Instagram

As a user, I want to share recipes on Instagram, so that I can recommend recipes visually through social media.

Given, the user is viewing a recipe page

When, the user selects Instagram sharing option

Then, the recipe details/link should be shared successfully.

8.3 Allow users to copy recipe link

As a user, I want to copy recipe links, so that I can share recipes through any platform.

Given, the user is viewing a recipe page

When, the user clicks on "Copy Link" button

Then, the recipe URL should be copied successfully.

- a. Create “Copy Link” button on recipe page.
- b. Copy recipe URL to clipboard automatically.
- c. Display confirmation message after copying link.

9. Dashboard Usage

9.1 Display total number of recipes viewed

As an admin, I want to view total recipe views, so that I can track user engagement on the platform.

Given, the admin is logged into dashboard

When, the admin opens analytics section

Then, the total number of recipe views should be displayed.

- a. Track recipe page views in database.
- b. Display total recipe views in dashboard analytics.
- c. Update dashboard metrics dynamically.

9.2 Display most popular recipes

As an admin, I want to view total recipe views, so that I can track user engagement on the platform.

Given, the admin is logged into dashboard

When, the admin opens analytics section

Then, the total number of recipe views should be displayed.

- a. Track recipe page views in database.
- b. Display total recipe views in dashboard analytics.
- c. Update dashboard metrics dynamically.

9.3 Display number of recipes submitted by contributors

As an admin, I want to view the number of submitted recipes, so that I can monitor contributor activity on the platform.

Given, contributors submit recipes

When, the admin accesses dashboard reports

Then, the total submitted recipes count should be displayed.

9.4 Display user engagement and feedback analytics

As an admin, I want to view user engagement and feedback analytics, so that I can evaluate platform usage and user satisfaction.

Given, users interact with recipes and feedback features

When, the admin opens dashboard analytics

Then, engagement metrics and feedback analytics should be displayed successfully.

- a. Track ratings, comments, and recipe interactions.
- b. Display engagement analytics in dashboard reports.
- c. Generate feedback summary reports automatically.

10. Admin Approval Process – Approval

10.1 Create admin login access

As an admin, I want to log into the admin panel, so that I can securely access recipe approval features.

Given, the admin has valid login credentials

When, the admin enters username and password

Then, the admin should be logged into the admin panel successfully.

10.2 Display pending recipes in admin dashboard

As an admin, I want to view pending recipes in the admin dashboard, so that I can review submitted recipes before approval.

Given, the admin is logged into the admin panel

When, the admin opens the pending recipes section

Then, all submitted recipes with pending status should be displayed.

- a. Create pending recipes section in admin dashboard.
- b. Fetch recipes with pending status from database.
- c. Display recipe name, contributor name, diet type, and submission date.
- d. Allow admin to open full recipe details for review.

10.3 Allow admin to approve recipes in one click

As an admin, I want to approve recipes in one click, so that approved recipes can be published quickly.

Given, the admin is reviewing a pending recipe

When, the admin clicks on the “Approve” button

Then, the recipe status should change from pending to approved.

- a. Create “Approve” button for each pending recipe.
- b. Update recipe status after admin approval.
- c. Show confirmation message after approval.
- d. Move approved recipe to published recipes list.

10.4 Store approved recipes in database

As an admin, I want approved recipes to be stored in the database, so that approved recipes can be managed and published correctly.

Given, the admin approves a recipe

When, the approval action is confirmed

Then, the approved recipe should be saved in the approved recipes database.

- a. Store approved recipe details in database.
- b. Save approval date and admin details.
- c. Update recipe status as “Approved”.
- d. Make approved recipe available for website publishing.

11.

12. User Profile Management

12.1 Allow users to save favorite recipes

As a user, I want to save my favorite recipes, so that I can access them easily later.

Given, the user is logged into the platform

When, the user clicks on “Save as Favorite”

Then, the selected recipe should be saved in the user’s profile.

- a. Create “Save as Favorite” button on recipe page.
- b. Store saved recipes under user profile.
- c. Allow users to remove recipes from favorites list.

12.2 Allow users to view previously viewed recipes

As a user, I want to view my previously viewed recipes, so that I can quickly return to recipes I recently checked.

Given, the user is logged into the platform

When, the user opens profile section

Then, recently viewed recipes should be displayed.

- a. Track recipes viewed by logged-in users.
- b. Display recently viewed recipes in user profile.
- c. Sort recently viewed recipes by latest viewed date.

12.3 Allow users to manage dietary preferences in profile settings

As a user, I want to manage my dietary preferences in profile settings, so that I can get recipe suggestions based on my needs.

Given, the user is logged into the platform

When, the user updates dietary preferences in profile settings

Then, the selected preferences should be saved successfully.

- a. Create dietary preference section in user profile.
- b. Allow users to add, edit, or remove dietary preferences.
- c. Use saved preferences to display suitable recipes.

13. Security and Validation

13.1 Validate mandatory fields in recipe submission form

As a user, I want clear validation messages for mandatory fields, so that I can complete the recipe form correctly.

Given, the user is filling the recipe submission form

When, the user submits the form with missing mandatory fields

Then, the system should display validation messages for required fields.

- a. Mark required fields clearly in the form.
- b. Validate mandatory fields before form submission.
- c. Display error messages for missing information.

13.2 Restrict inappropriate content submission

As an admin, I want inappropriate content to be restricted, so that only safe and suitable content is submitted to the platform.

Given, the user enters content in the recipe form or feedback section

When, the content includes inappropriate words or spam

Then, the system should restrict submission and show an error message.

- a. Add basic content validation for inappropriate words.

- b. Restrict spam or harmful comments.
- c. Notify users when submitted content is not allowed.

13.3 Secure admin access with login authentication

As an admin, I want secure login authentication, so that only authorized users can access admin features.

Given, the admin opens the admin login page

When, the admin enters valid login details

Then, the admin should be allowed to access the admin dashboard.

- a. Create secure admin login access.
- b. Validate admin username and password.
- c. Restrict admin dashboard access to authorized users only.

Prototyping

Home page:

A wireframe of a home page for finding recipes for IBD patients. The page features a header with a logo on the left and a "Login |" link on the right. Below the header is a search bar with the placeholder text "search Recipes". To the right of the search bar is a dropdown menu labeled "Filter By Diet" with a list of dietary preferences: Vegan, Vegetarian, Lactose-Fre, Low Fiber, Low Fat, and High Protein. Below the search bar and filter menu is a green button labeled "Submit Recipe". At the bottom of the page is a "Footer" label.

Request Approval Message

A browser window titled "Recipe Approval" with the address bar showing "https://healthyrecipes.com". The main content area displays a green checkmark icon followed by the text "Recipe Approved". Below this, it says "Recipe is now available to all users." At the bottom, there is a button labeled "View Published Recipe".

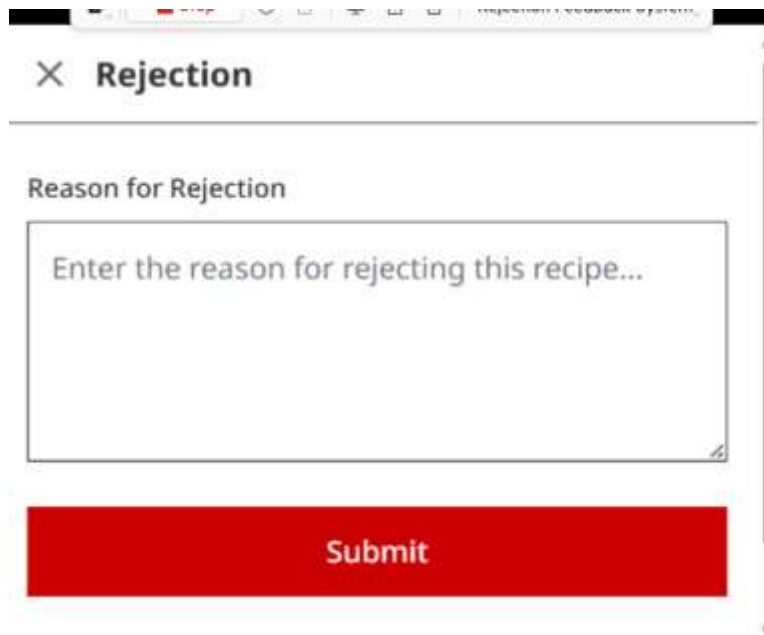

A mobile app screen showing a green checkmark icon followed by the text "Recipe Approved". Below this, it says "Recipe is now available to all users." At the bottom, there is a large orange button labeled "View Published Recipe" with an external link icon. Below the button, there is a link that says "What happens next?" with a question mark icon.

Rejection of Recipe Page for Admin

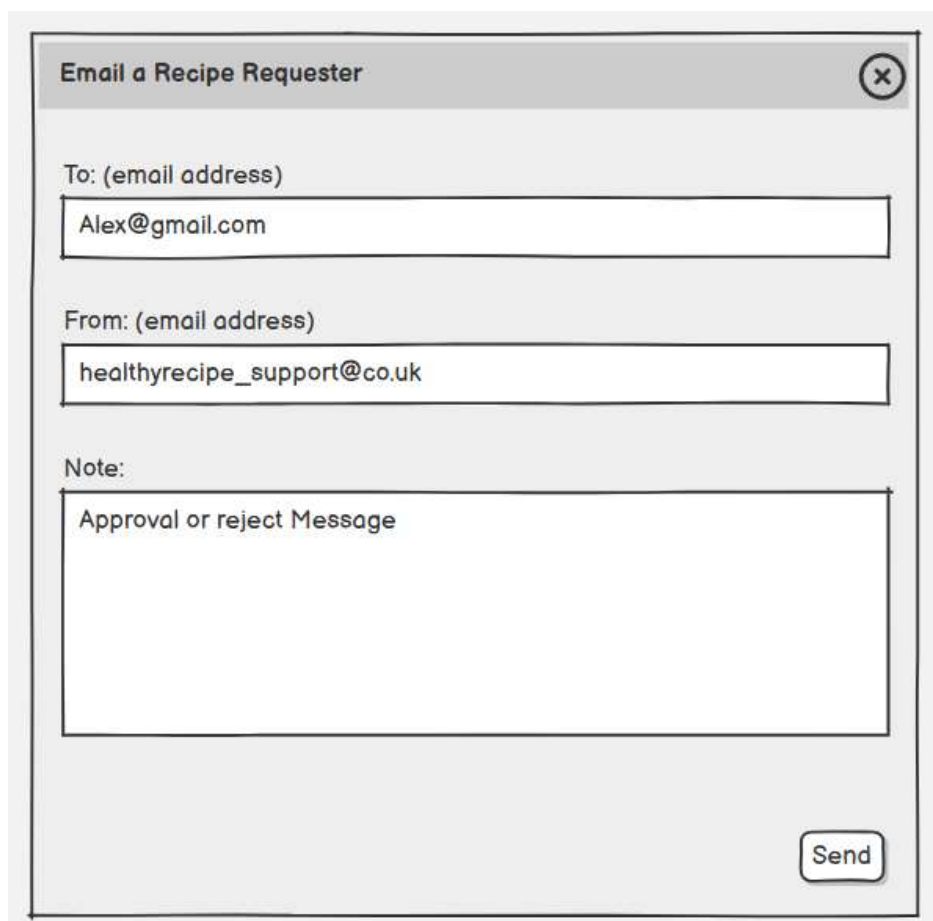

A browser window titled "Rejection" with the address bar showing "https://healthyrecipes.com". The main content area displays the text "Reason for Rejection" above a large text input field. Below the input field, there is a button labeled "Submit".

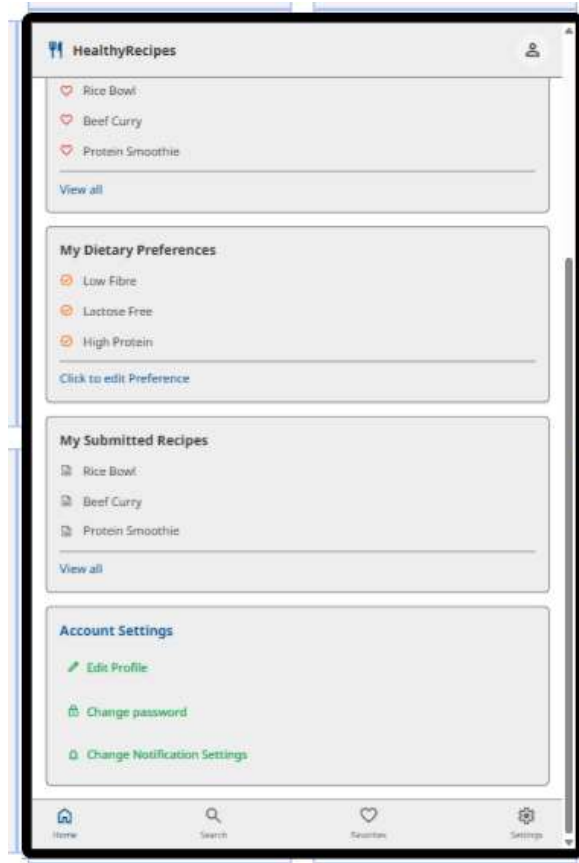

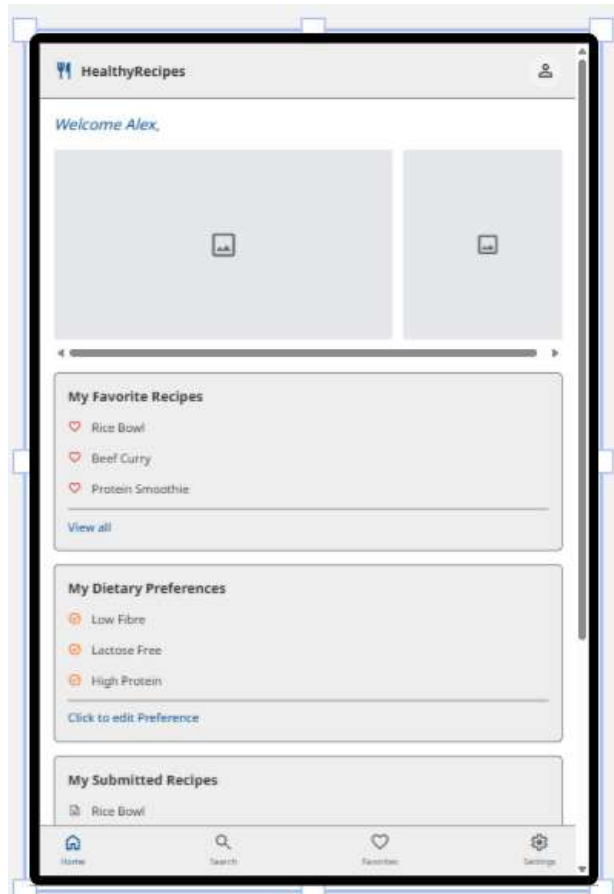

A screenshot of a web browser window showing a 'Rejection' dialog box. The dialog has a title bar with a close button (X) and the word 'Rejection'. Below the title bar is a section labeled 'Reason for Rejection' containing a large text input field with the placeholder text 'Enter the reason for rejecting this recipe...'. At the bottom of the dialog is a prominent red button labeled 'Submit'.

Admin/Doctor Sending Email to Recipe Requestor

A screenshot of a web browser window showing an 'Email a Recipe Requester' dialog box. The dialog has a title bar with a close button (X) and the text 'Email a Recipe Requester'. Below the title bar are three input fields: 'To: (email address)' with the value 'Alex@gmail.com', 'From: (email address)' with the value 'healthyrecipe_support@co.uk', and 'Note:' with the placeholder text 'Approval or reject Message'. At the bottom right of the dialog is a button labeled 'Send'.

MVP Release

Release 1

- Search recipes
- Recipe details
- Submit recipe
- Admin approval

Release 2

- Ratings
- Feedback
- User profiles

Release 3

- Email sharing
- Social sharing
- Analytics dashboard

Requirements Traceability Matrix

Business Objective	Requirement	User Story
Increase engagement	Recipe search	US-01
Improve content quality	Admin approval	US-15
Increase contributions	Recipe submission	US-05

Risks & Assumptions

✓ Risks

- Low user adoption
- Poor quality submissions
- Delayed admin approvals

✓ Mitigation

- Training
- Content moderation
- Automated notifications

Lessons Learned

This project provided valuable practical experience in applying Business Analysis techniques across the full solution lifecycle, from problem identification through to solution design and validation.

Key learnings included:

- Conducting stakeholder analysis to understand user needs, business objectives, and operational challenges.
- Eliciting, analysing, and documenting business requirements using structured Business Analysis techniques.
- Creating As-Is and To-Be process models to identify inefficiencies and define improved future-state workflows.
- Translating business requirements into prioritised product backlog items, user stories, and measurable acceptance criteria.
- Applying MoSCoW prioritisation to support MVP definition and phased delivery planning.
- Designing wireframes and interactive prototypes to validate requirements and improve stakeholder understanding.
- Establishing traceability between business objectives, functional requirements, and proposed solutions.
- Identifying risks, assumptions, and dependencies that could impact successful project delivery.
- Collaborating from both business and user perspectives to ensure the proposed solution aligned with operational needs and organisational goals.
- Demonstrating how structured Business Analysis can bridge the gap between business challenges and technology-enabled solutions.

This case study strengthened my ability to analyse business problems, facilitate requirements definition, structure complex information, and develop solutions that deliver measurable business value while meeting stakeholder expectations.
